

# Challenge: Absolute Positioning

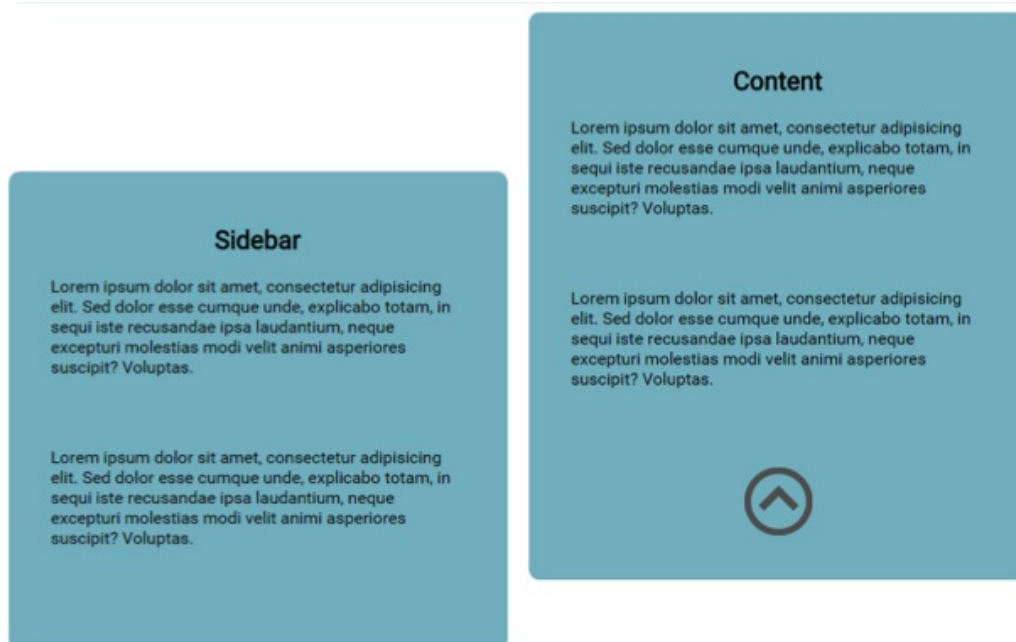

Continuing from the final challenge in the previous lesson, we are going to add a link-to-top image to the bottom right of the content div.

- 1- Remove the *borders* and left align the paragraphs (optional).
- 2- Place the image (located in this lessons *image* folder) after the final paragraph *closing* tag in content *div*.

Note: [Syntax of the `img` tag](#)

- 3- Give the image an *id* of `linkToTop` and we can give all paragraphs a *bottom margin* of 50px to make room for the image.

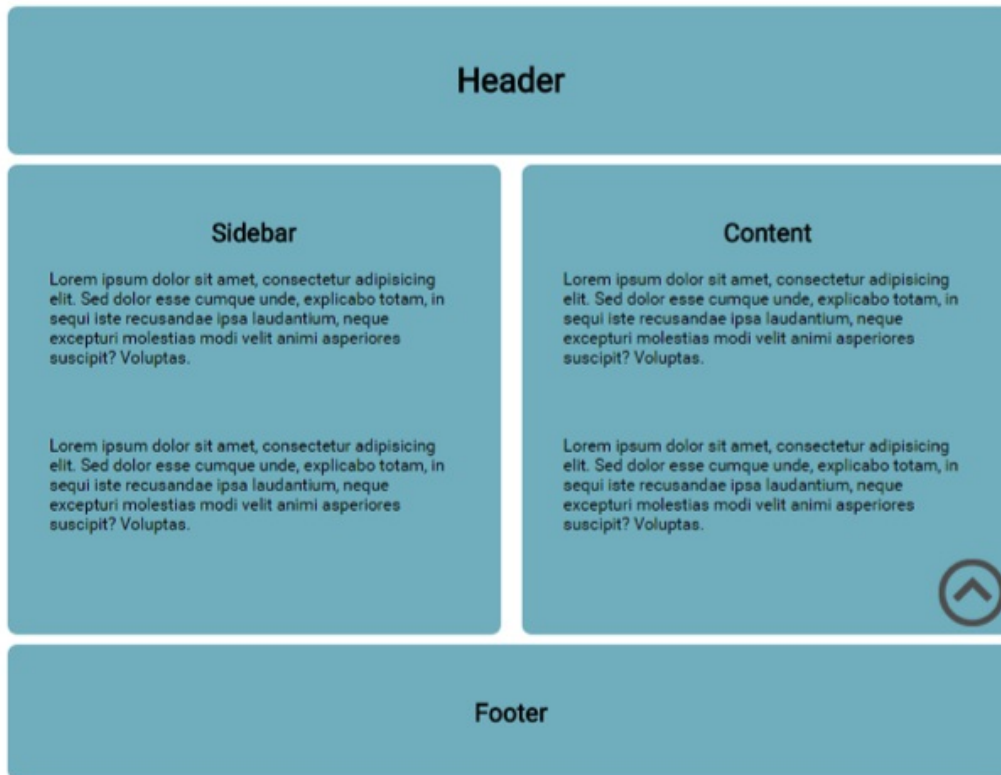

- 4- This is the most important step! Change the position of content to *relative* and `linkToTop` to *absolute*.
- 5- Notice how the element is now removed from the normal flow of the page. Now we can offset it where we

like in relation to the content *div*.

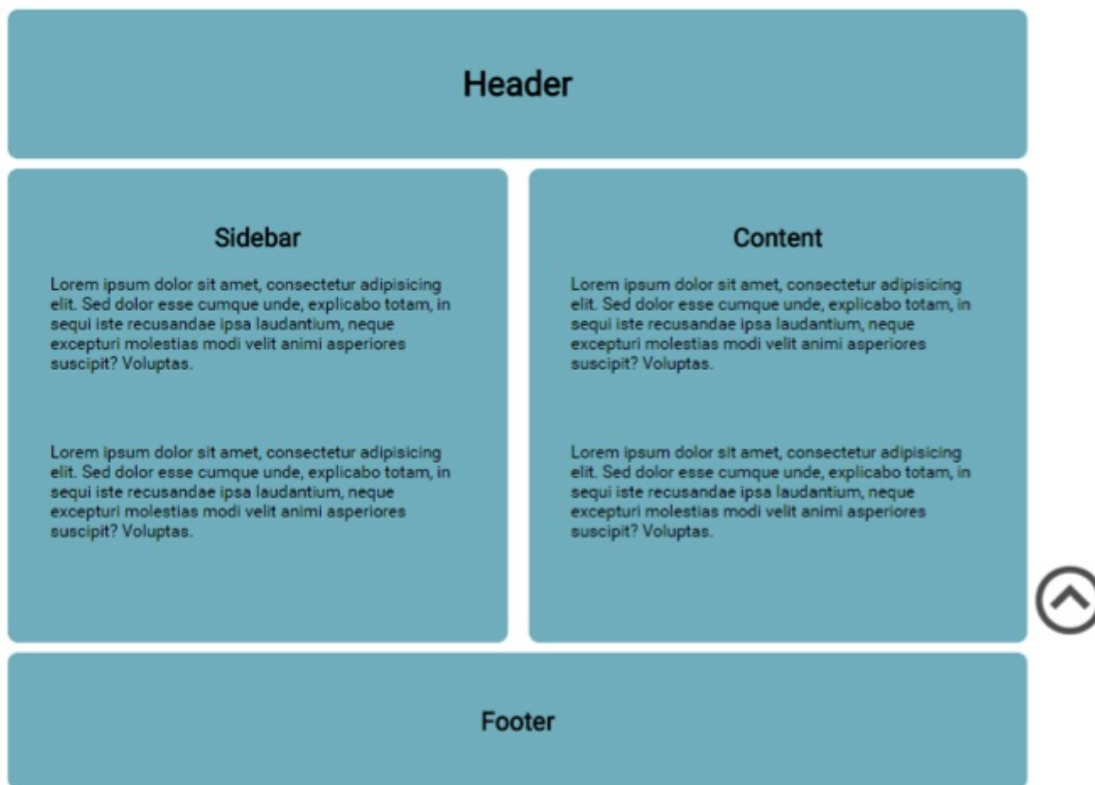

6- Place the linkToTop on the bottom right of content.

```
bottom: 0px;  
right: 0px; /*experiment with other values*/
```

7- From here we can offset the image if we wish. This example shows the offset is to the right with a minus value which will place it outside the content box.

```
right: -80px; /**/
```

8- For practice add another element to the left of the sidebar. It should have its own *id* (#sideLinkToTop)
